HOW TO MEASURE YOUR DOOR:

1. Measure width of door between the exterior brickmold. Measure 3 places and use smallest dimension. This is your STORM DOOR OPENING WIDTH.
2. Measure door frame height from inside of the head brickmold to sill. This is your STORM DOOR OPENING HEIGHT.
3. Measure outside width and depth of where your new door will be mounted. Both of these dimensions must not be less than 1-1/8” (see diagrams below).
4. From outside looking in, specify if your door is hinged on the right or left side

FACTORY MEASURE AND INSTALLATION AVAILABLE

STORM DOORS
©2019 Casco Industries, Inc.
Self Storing

The Self-Storing system eliminates changing screens and storm windows — just raise to ventilate, lower to insulate.

Screen Door

Screen Doors add beauty and ventilation to any home porch. Door available with or without center mullion and kick plate as shown above. No glass included.

Full View

The Full View Door allows the beauty of your handsome entrance door to show with the options of having either a full glass panel or screen panel. Both glass and screen panels are included.

Full View with Kick Plate

With the addition of a bottom kick plate, this full view door style adds a mark of elegance to your home with rugged durability. Both glass and screen panels are included.

Hi-Lite

Large screen panel interchangeable with top glass panel. Lower screen panel also available.

Why choose Casco

STORM DOORS?

Each door type acts as an additional line of defense against drafty doors, dust, exterior noise, and insects.

Heavy duty extrusions ensure a long lasting product for your home.

Multiple options give any homeowner versatility to fit their homes style

All STORM DOORS include:
- Storm Door w/Glass
- Frame
- Hinges
- Sill Expander
- Vinyl Sweep
- Closer and Wind Chain Kit
- Screw Pack
- Hardware of choice
